

The Operating System for the Physical World

Orchestrating how the physical world connects, computes, and responds

www.faclon.com

Founding Team at a Glance

**Rishi
Sharma**

CEO
B.Tech, IIT Bombay

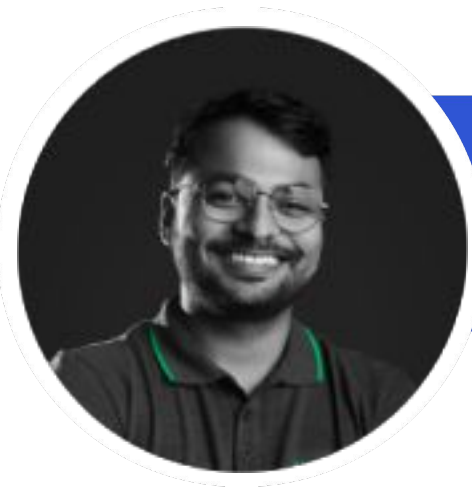

**Sarjan
Shah**

Board Member
BSc, MBA, ADPhil

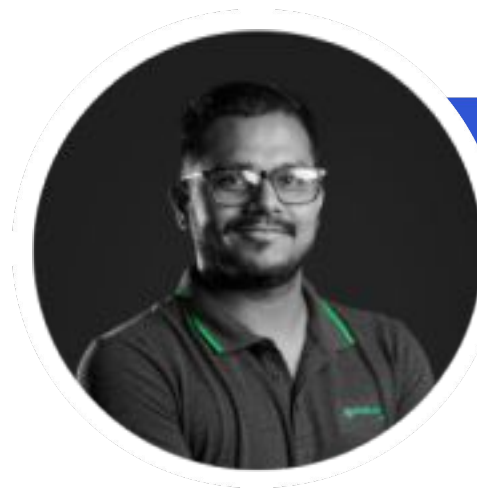

**Utkarsh
Narain**

CTO
Fellow, Royal Academy of
Engineering (London)

**Archit
Naraniwal**

CSO
B.Tech, IIT Bombay

**Vivek
Singh**

Chief Data Scientist
B.Tech, IIT Kanpur

**Siddharth
Jha**

Director of Product
B.Tech, IIT Bombay

Venture at a glance

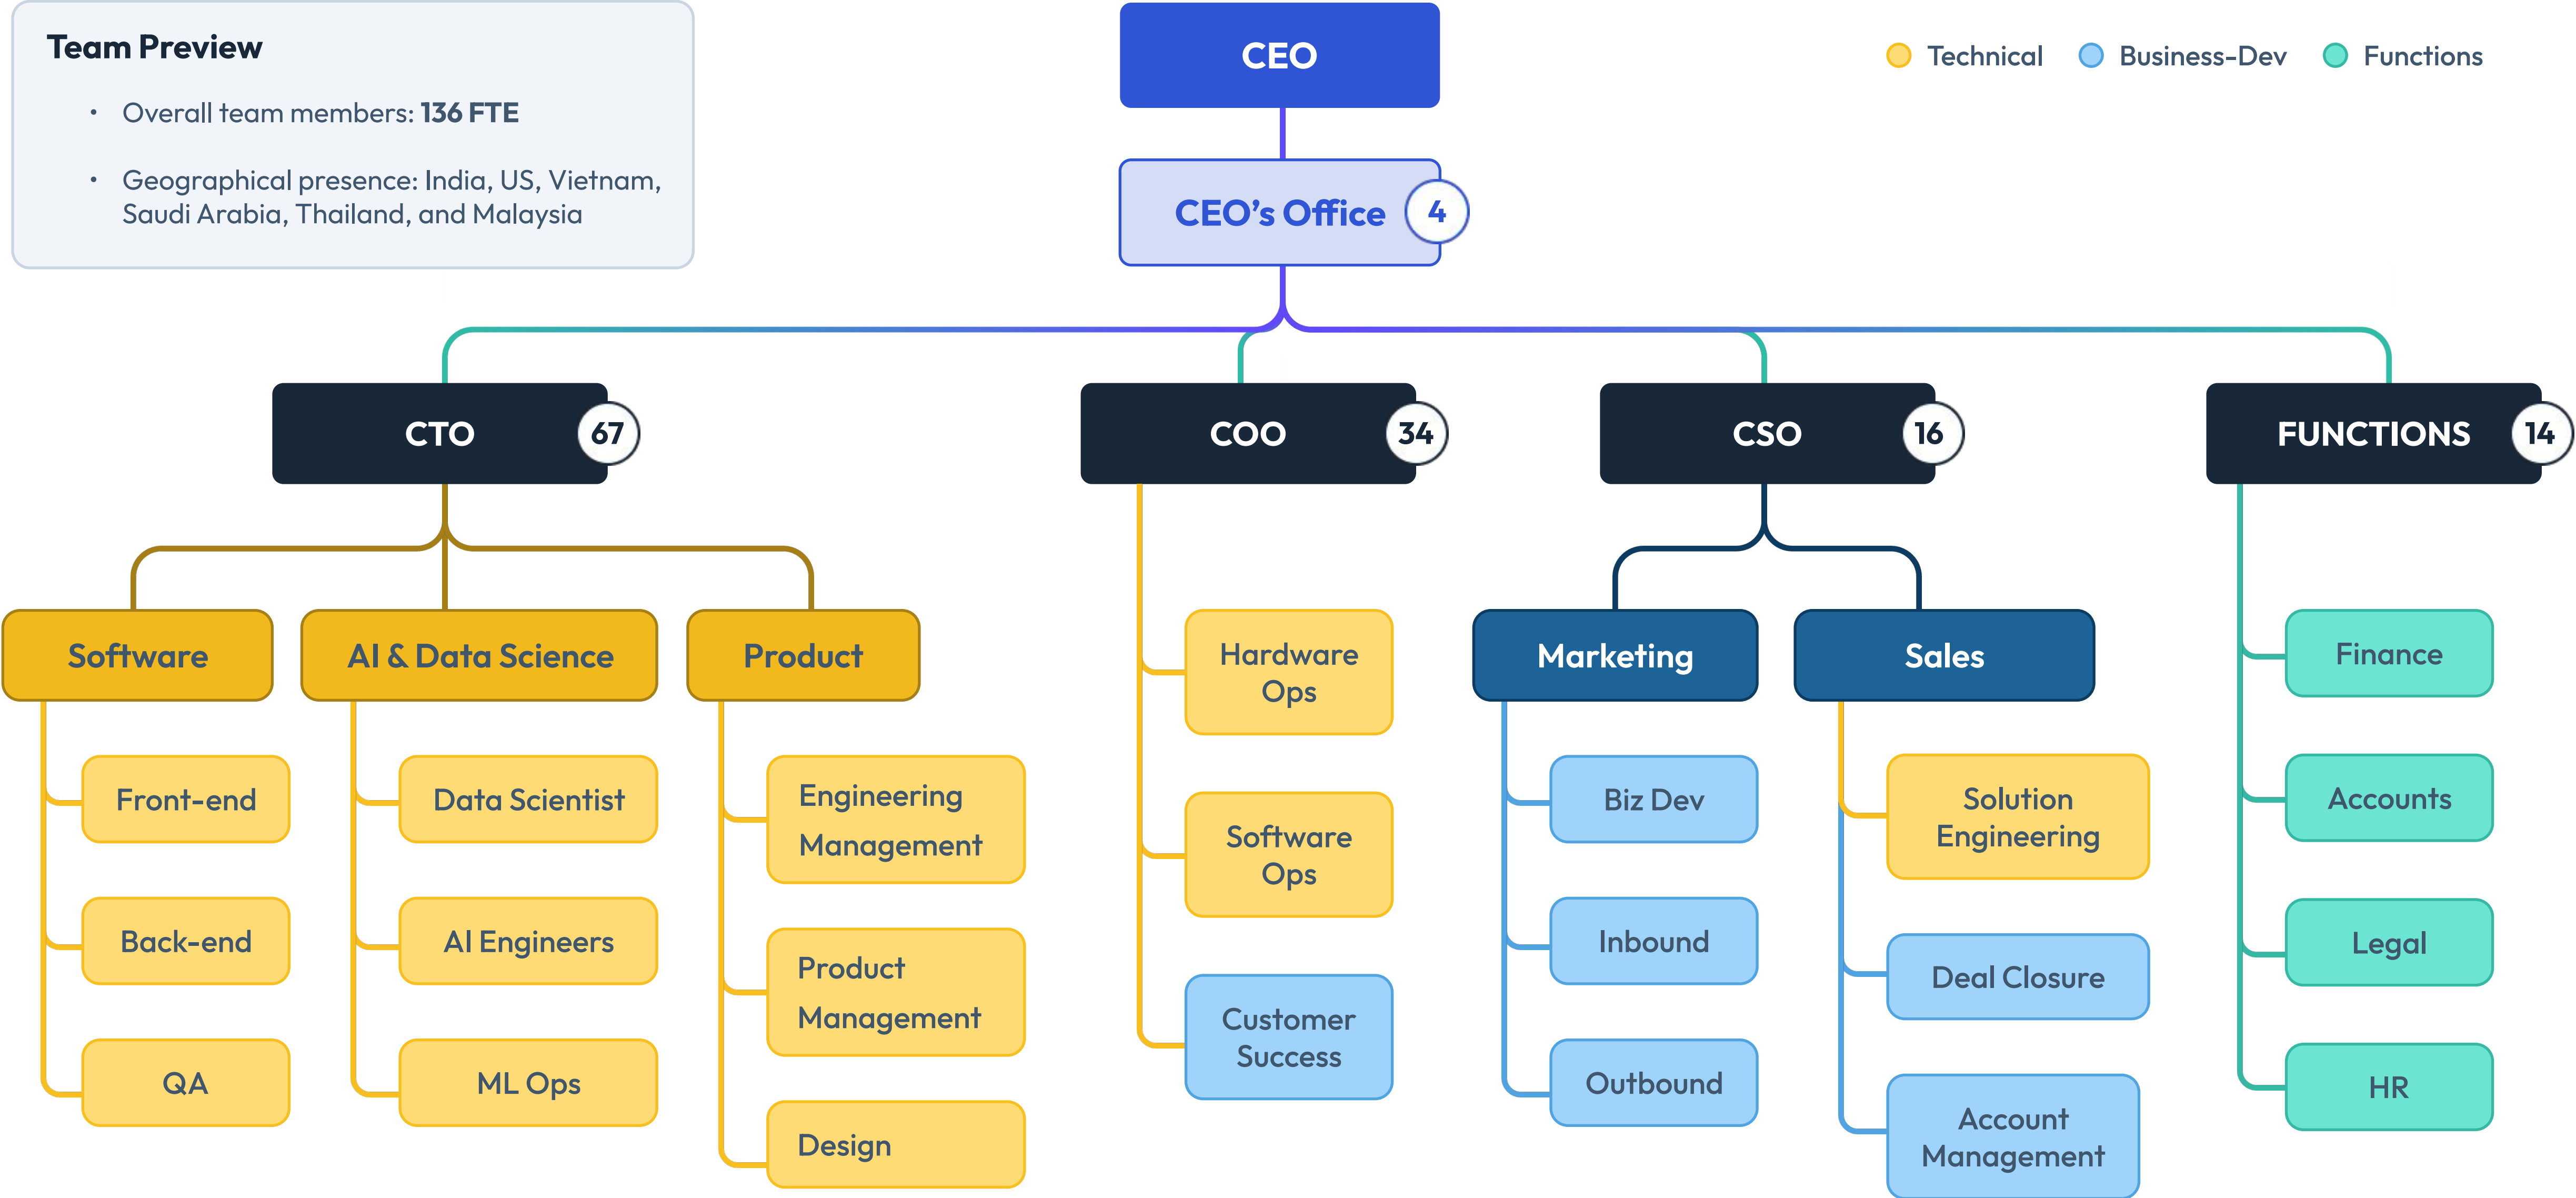

Founded in 2020, Faclon Labs is building the intelligence layer for the physical world. Our Industrial AI and IoT platform connects thousands of physical assets across factories, airports, smart cities, and utilities to deliver real-time visibility, predictive insights, and autonomous control.

Backed by a world-class team and sharpened under the strategic guidance of Sarjan Shah, we've rapidly scaled across India's largest enterprises. Today, Faclon Labs stands at the forefront of industrial digitization redefining how infrastructure is monitored, managed, and optimized.

Organizational Structure

Team Preview

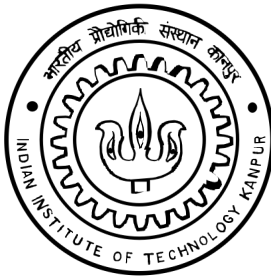

- Overall team members: **136 FTE**
- Geographical presence: India, US, Vietnam, Saudi Arabia, Thailand, and Malaysia

Offering Buckets

Analytics Use Cases

Plant Productivity

OEE Suite

Process Parameter Optimization

Digital Process Twins

Production and Process Planner

AI Agents

Plant Digitization

IO-OT Suite

Manufacturing Execution Systems (MES) Suite

Asset Twins

Custom Dashboarding and Reporting

Digital Logbooks

Sustainability and Energy Management

Energy Management System

Vibration enabled CBM

Stream enabled CBM

Vision based Inspection

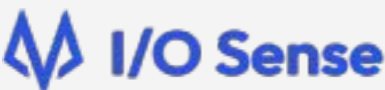

Asset reliability and safety

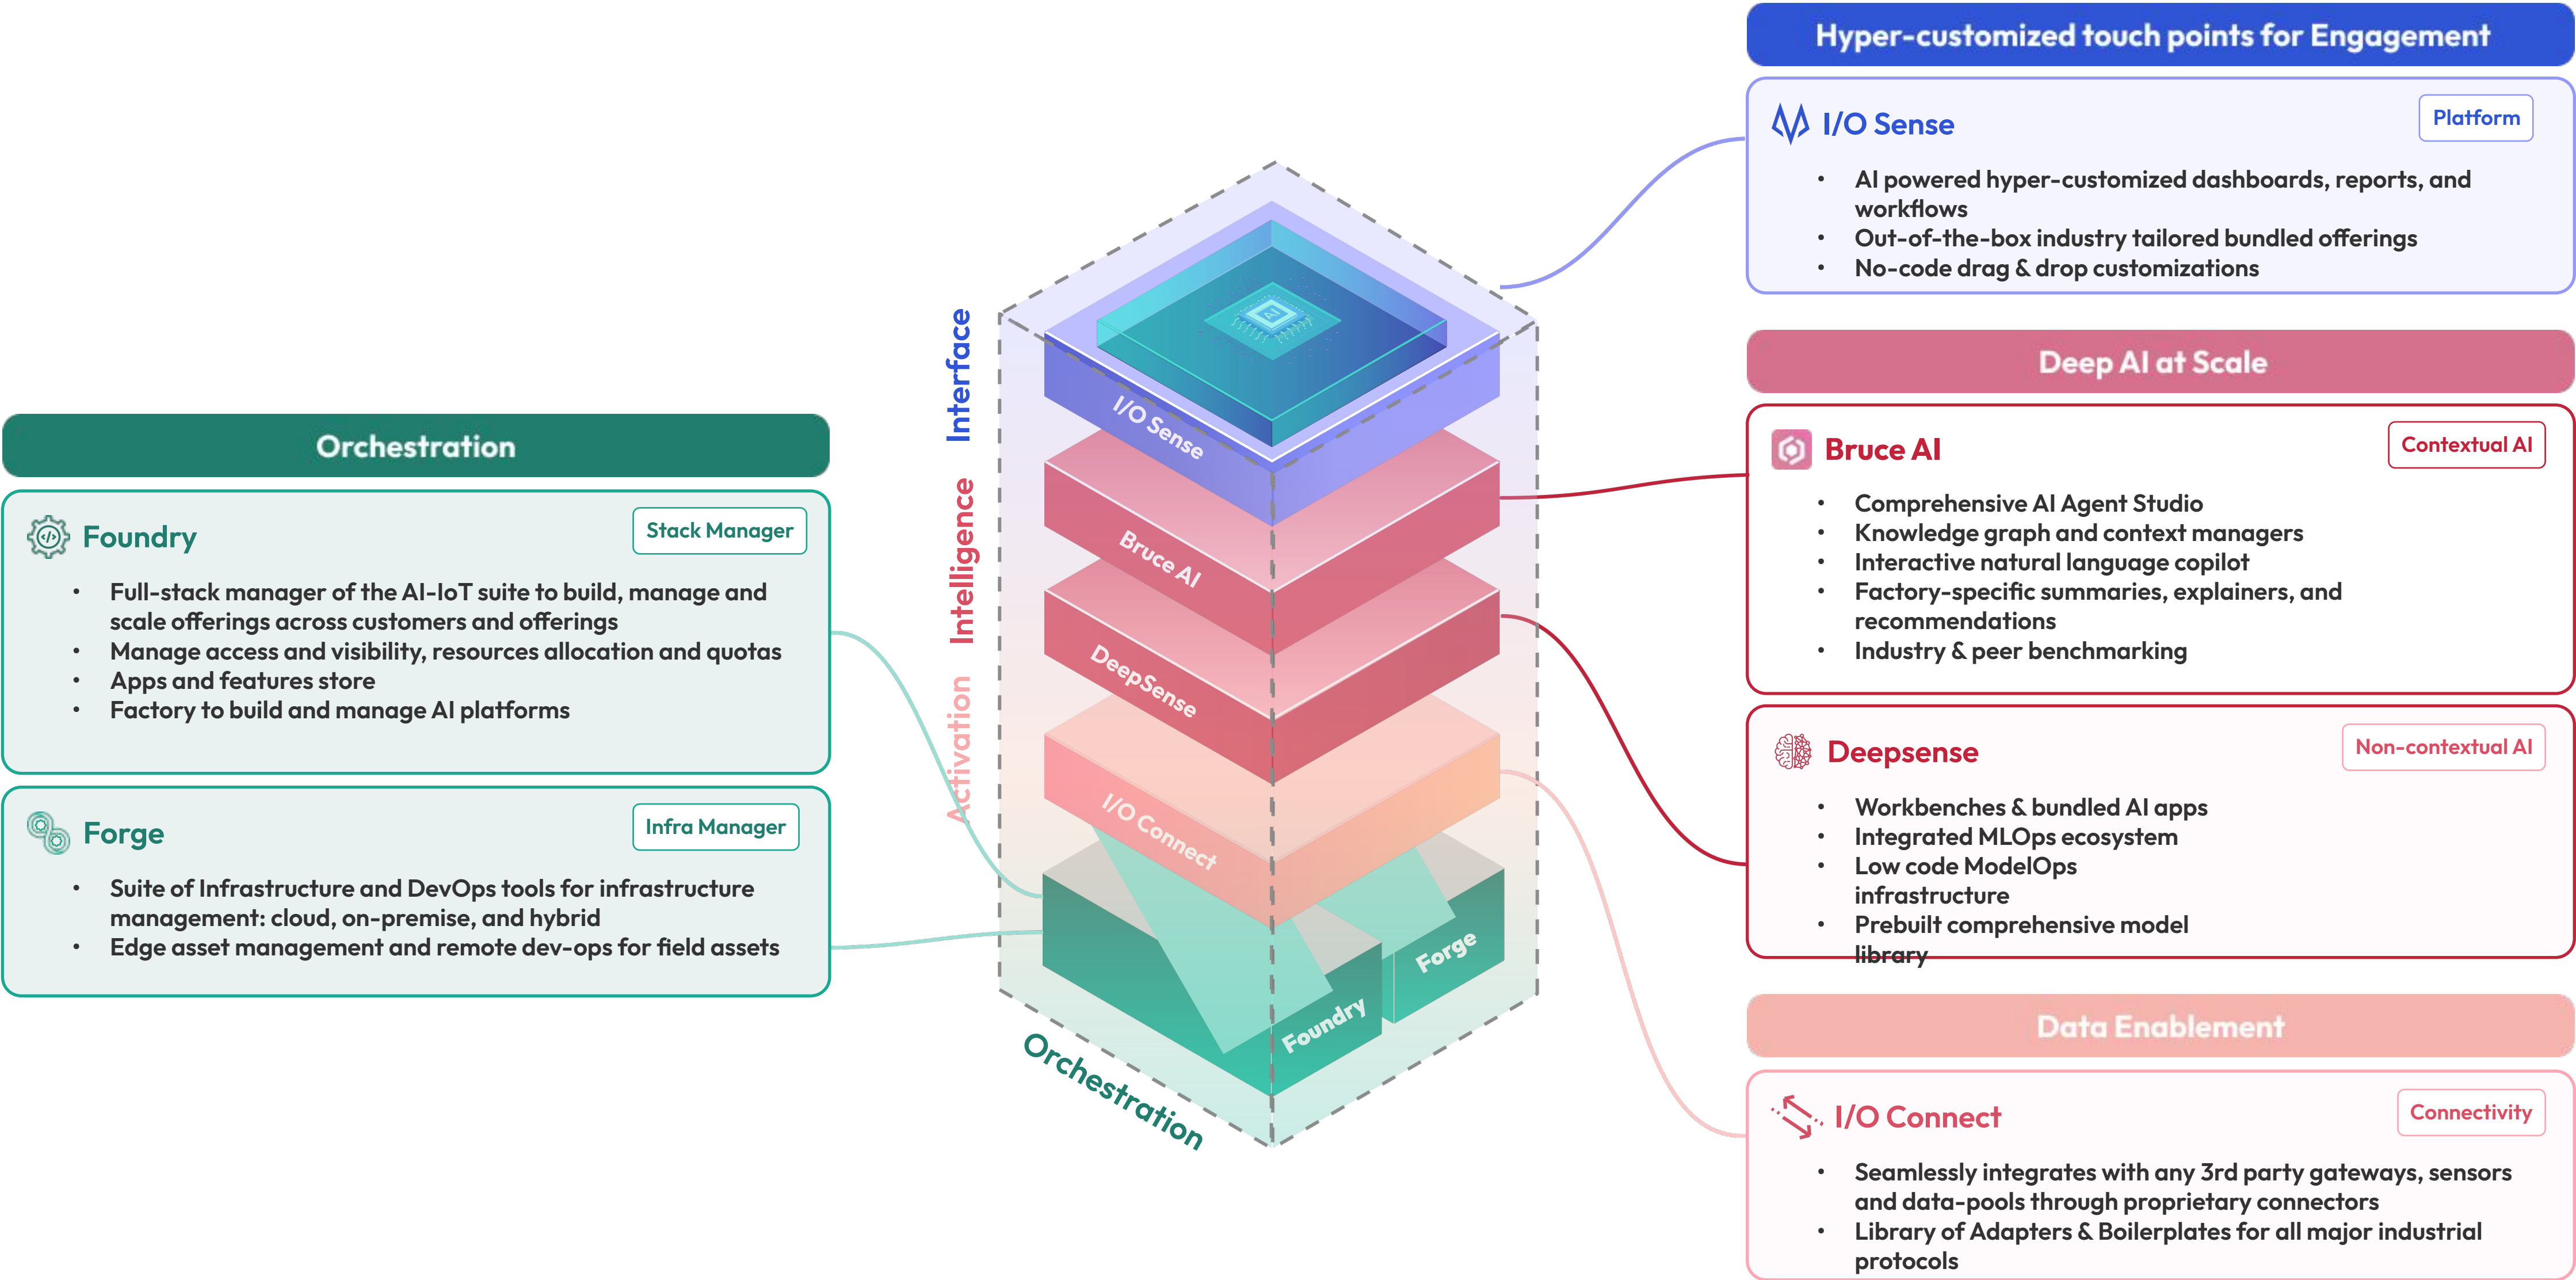

Enablers

I/O Sense Platform

Faclon Stack at a Glance

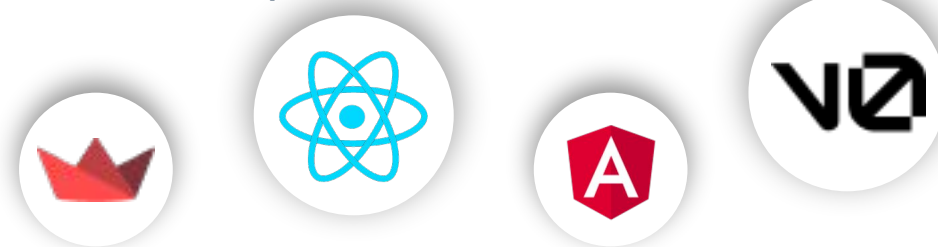

A deep-down into the Faclon Intelligence Platform (FIP)

I/O Sense | Core Interface Layer

AI SDKs

Fine-tuned SDKs across frameworks to build I/O Sense capabilities in minutes

Device and Asset Management

Total control over every connected asset, from onboarding to orchestration

Cross Platform Export & Embeddings

Platform and it's elements integratable to infinite endpoints, export and embed across external apps, tools, and systems

Production Planner

Steam Trap

OEE

I/O Matrix

I/O Sense Apps
Plug-and-play apps built for industrial intelligence from Planning, Simulation to Diagnosis

Accelerations

From compute to rendering across user platforms, process everything, faster and break compatibility bottlenecks

Rendering Acceleration | Automations | Insights Processing

Report Engine

Highly scalable reporting engine that runs highly curated reports to create bespoke outcomes, marrying deep agentic and analysis workloads with tailored representations.

PDF | Excel | Bespoke Formats

Canvassing Engines

From dashboards to digital twins to live geospatial views, unified no-code canvases for tailored outcomes

Bruce Integrations

Seamlessly integrate Bruce capabilities into key elements of the platform to significantly enrich outcomes with contextual intelligence

Users and Sub-users Management

Comprehensive access and visibility management coupled with sharing capabilites as sub-users with bespoke CRUD configurations

Triggers, Events & Notifications Management System

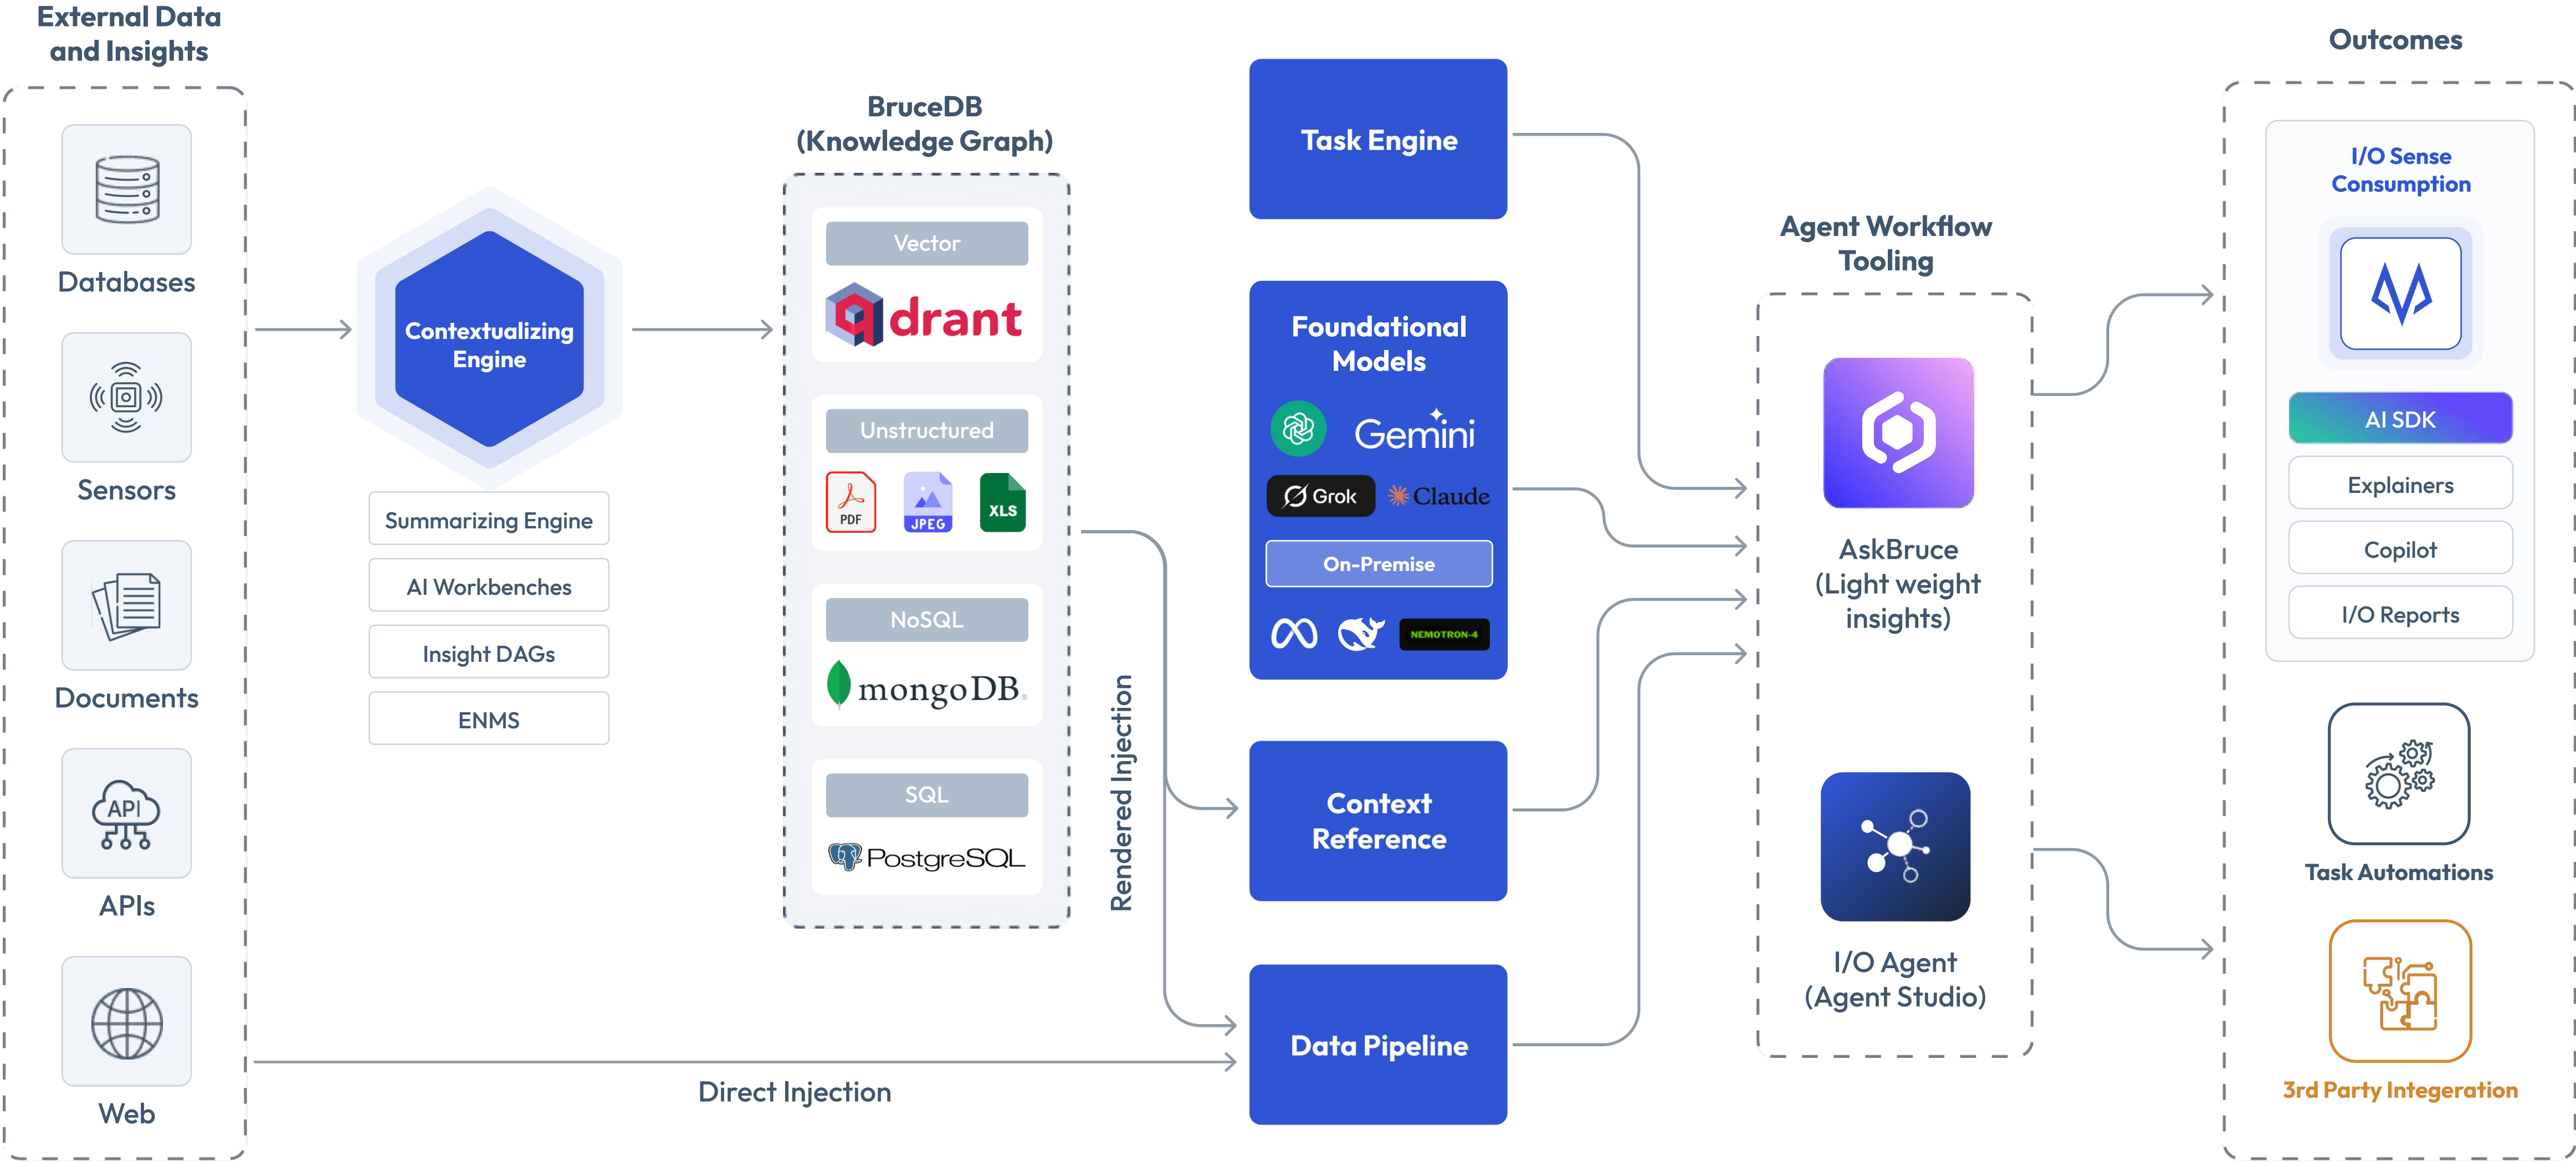

Stay ahead with real-time events and smart, context-aware notifications

Automations | Workflows | Alarms

Bruce AI | Contextual Intelligence Stack

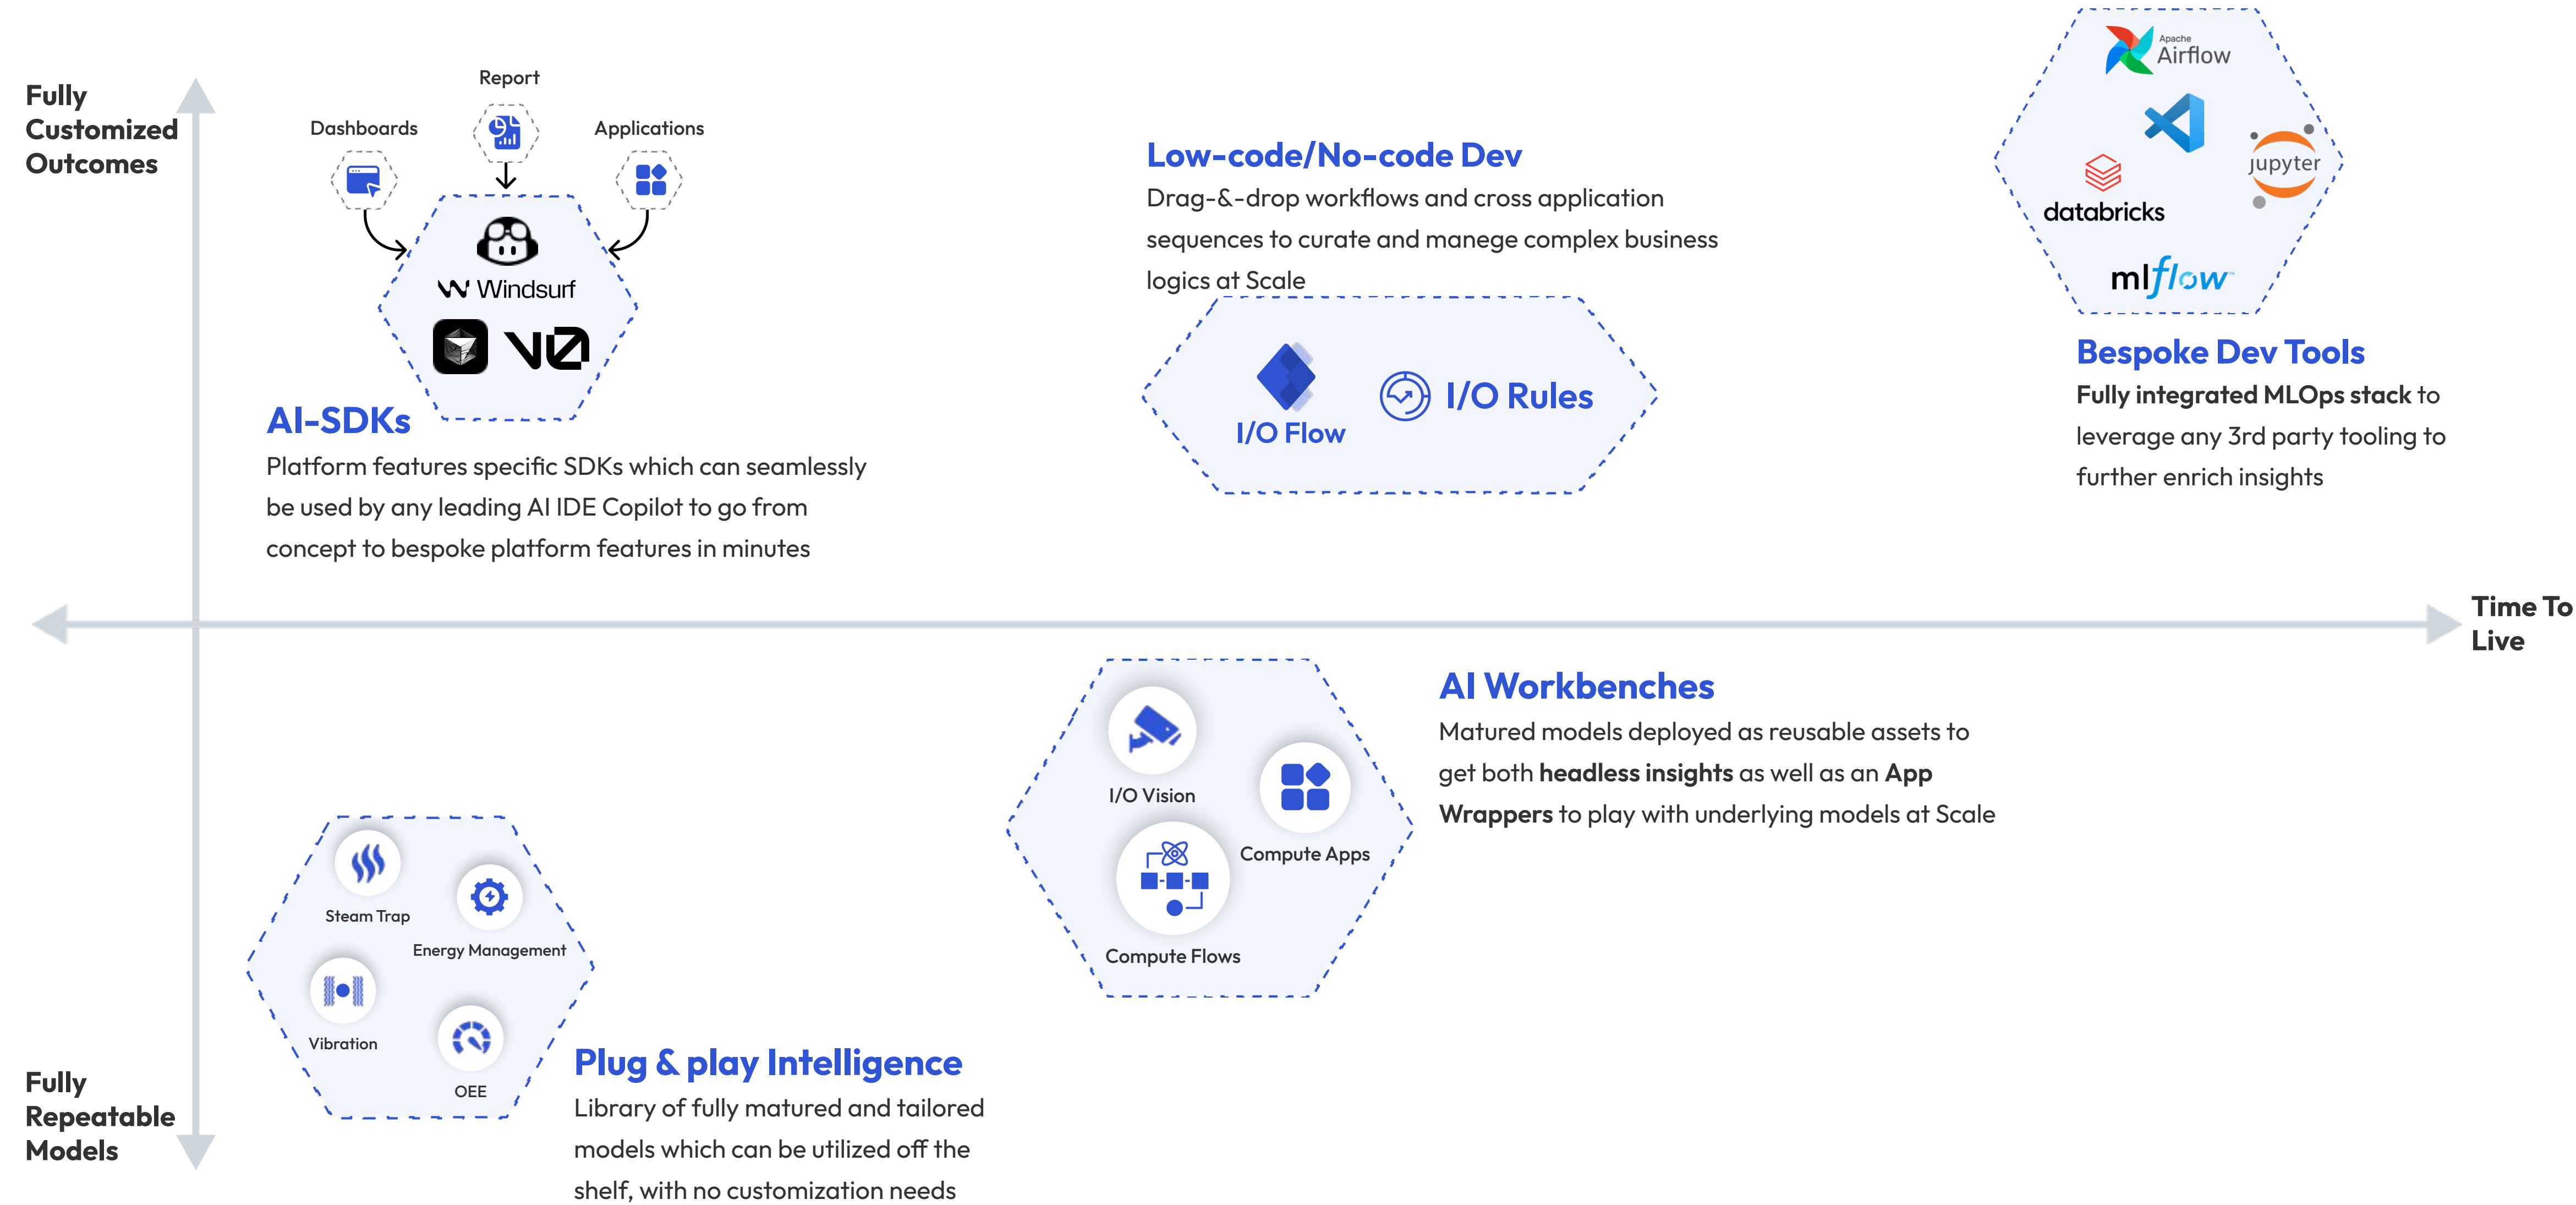

End-to-end Agentic ecosystems to simulate Human Expertise at Scale

FACLONLABS

DeepSense | Non-contextual Intelligence Stack

Full-stack and deeply integrated capabilities to Build, Test and Deploy AI models at Scale

Connect: DataOps at Scale

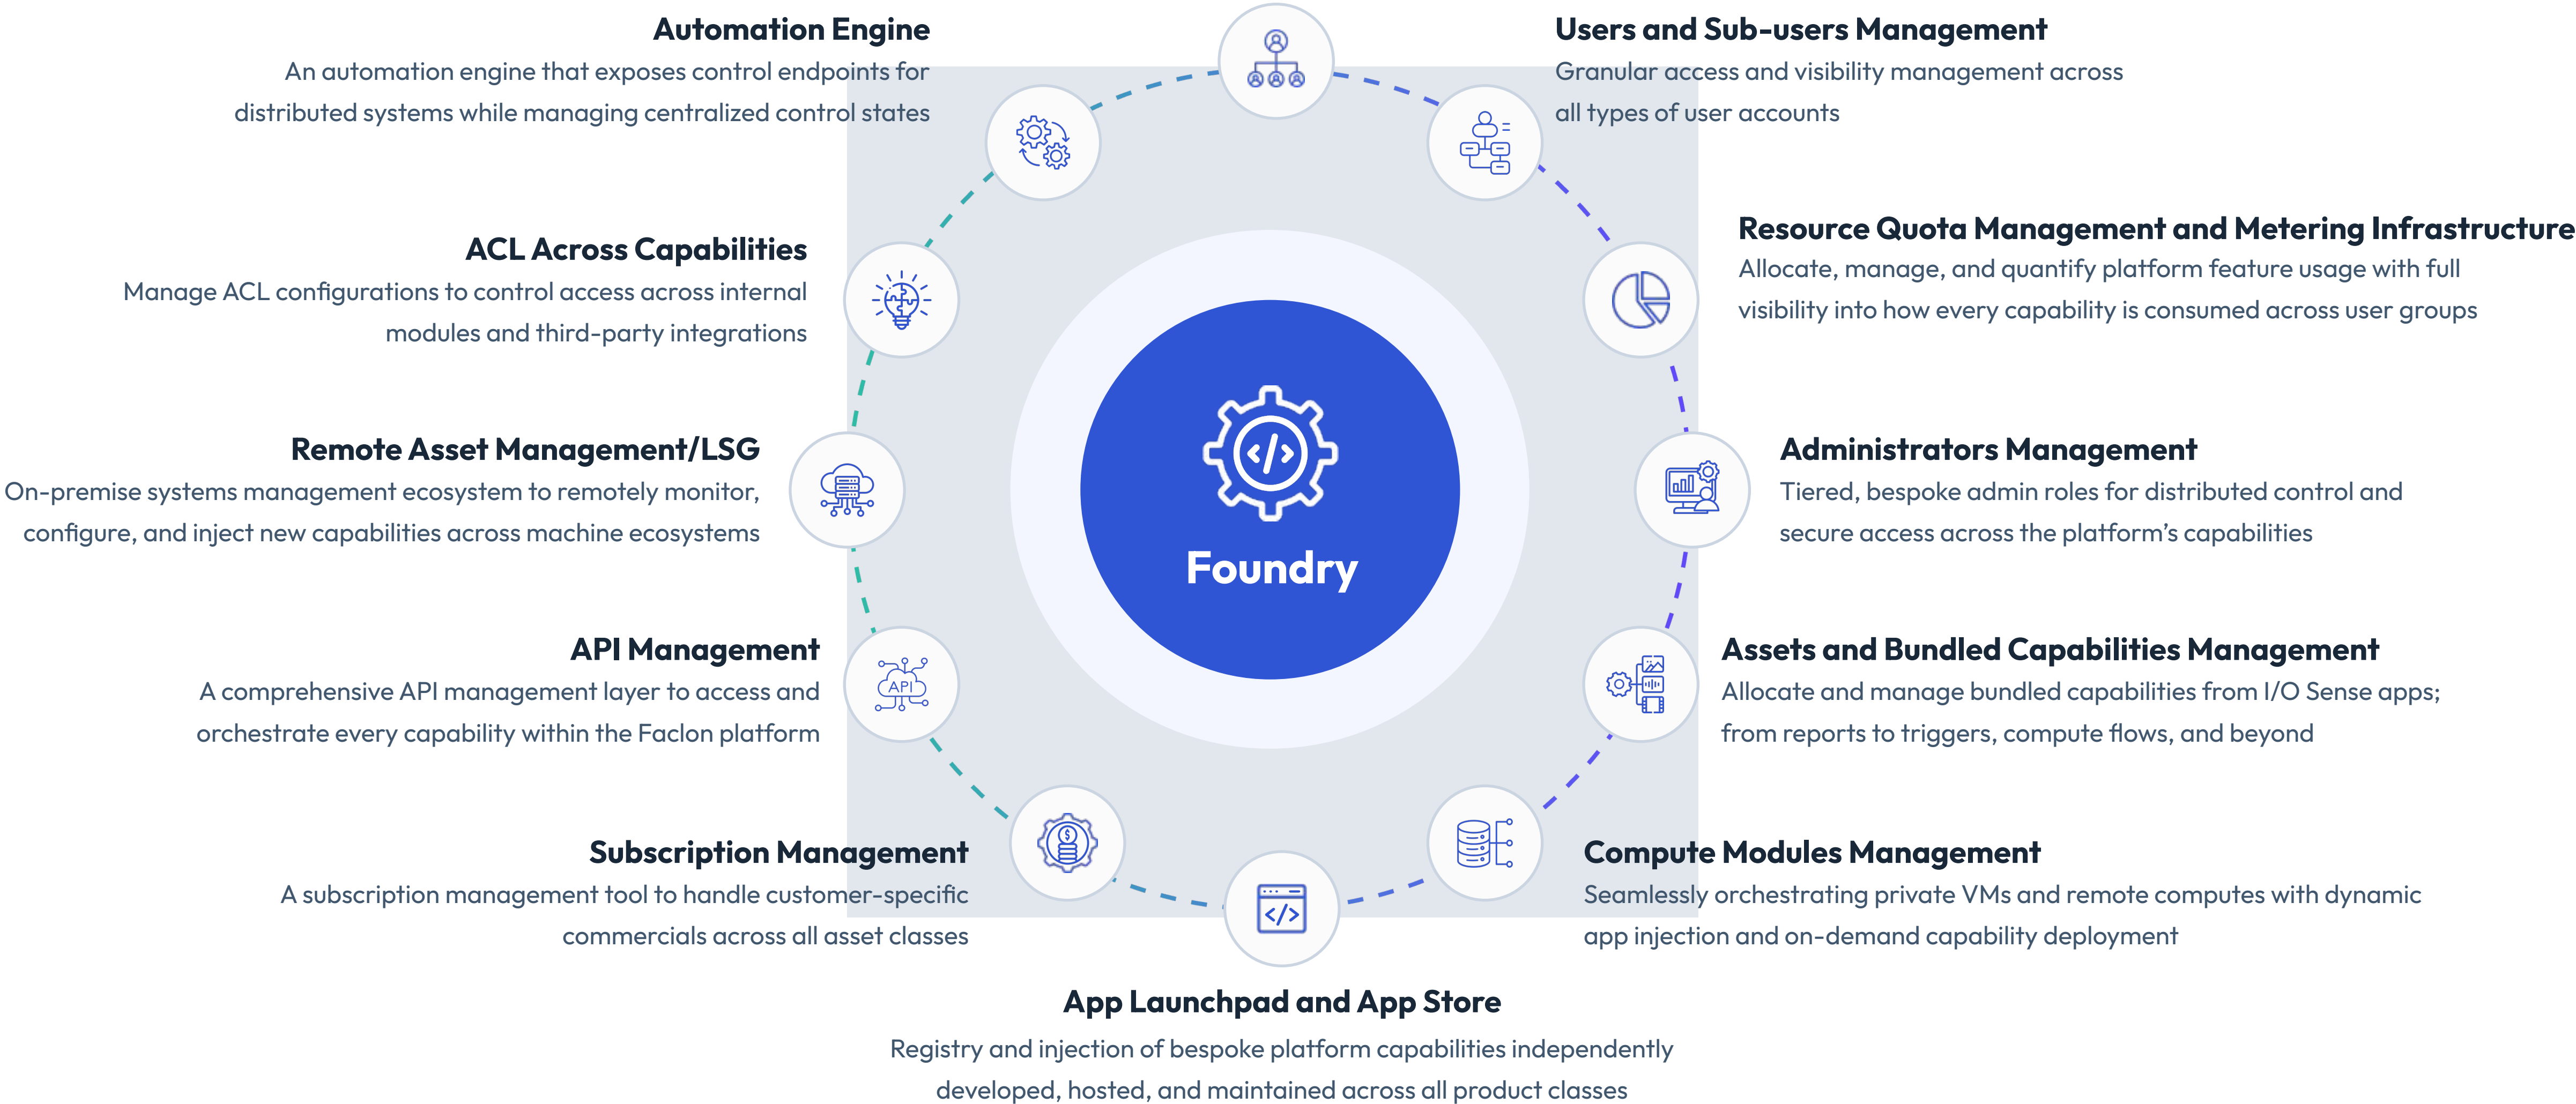

Data Orchestration Infrastructure to bridge the connectivity between the Physical world and the Digital World

*Patent in process

Platform Ecosystems and Organizations

Manage private platform ecosystems with full multi-tenancy enabling precise resource control and distributed cost of ownership

Forge | Infrastructure and DevOps Management

**GitLab**

**Jenkins**

**docker**

**Terraform**

**Argo CD**

**RED HAT
ANSIBLE**

**Grafana** **Prometheus**

Code & Version Control

Developers have collaboratively managed and versioned code through GitLab

Security Scanning

Secrets are securely stored, privileged sessions are monitored in real time, and just-in-time access is enforced for critical systems

Containerization

Realtime infrastructure monitoring is enabled using Web Application Firewalls (WAF), intrusion detection systems, and continuous scanning tools

Infrastructure Provisioning

Terraform has provisioned cloud infrastructure

Orchestration

EKS clusters and networking as code, ensuring consistent and repeatable environments

Configuration Management

Ansible automates application and system configurations, streamlining environment setup and management

Monitoring

Prometheus collects real-time service metrics, the ELK Stack offers deep log visibility, and Grafana powers live dashboards together enabling full-system observability

Infrastructure Level Security

**Network Fortification**

IDS (Intrusion Detection System) monitors network traffic for suspicious activity and IDP (Intrusion Detection and Prevention) for detection and actively blocking threats

**Secrets Control**

Secrets are securely stored, privileged sessions are continuously monitored, and just-in-time access is enforced for all critical systems

**Cloud & Physical Defense**

Cloud resources are secured across all layers network, application, and data while physical hardware access is tightly restricted

**Governance & Response**

Security policies are strictly enforced, regular audits are performed, and incident response plans are consistently maintained

**Identity Guardrails**

IAM ensures only the right individuals access the right resources by enforcing least privilege, MFA, and regular audits

**Real-Time Surveillance**

Realtime infrastructure monitoring is enabled using Web Application Firewalls (WAF), intrusion detection systems, and continuous scanning tools

**Vulnerability Sweeping** RTM - 3 months

Infrastructure is continuously scanned for vulnerabilities and misconfigurations, with automated remediation actively in place

Code Level Security

**Network Fortification**

Secure coding practices aligned with the OWASP Top 10 have been enforced to prevent common vulnerabilities such as SQL injection and XSS

**Regular 3rd Party Audits and Peer Reviews**

Regular automated and manual VAPT is conducted to proactively identify and remediate vulnerabilities before they can be exploited. Regular peer reviews are also done

**Built-In Code Protection** RTM - 2 months

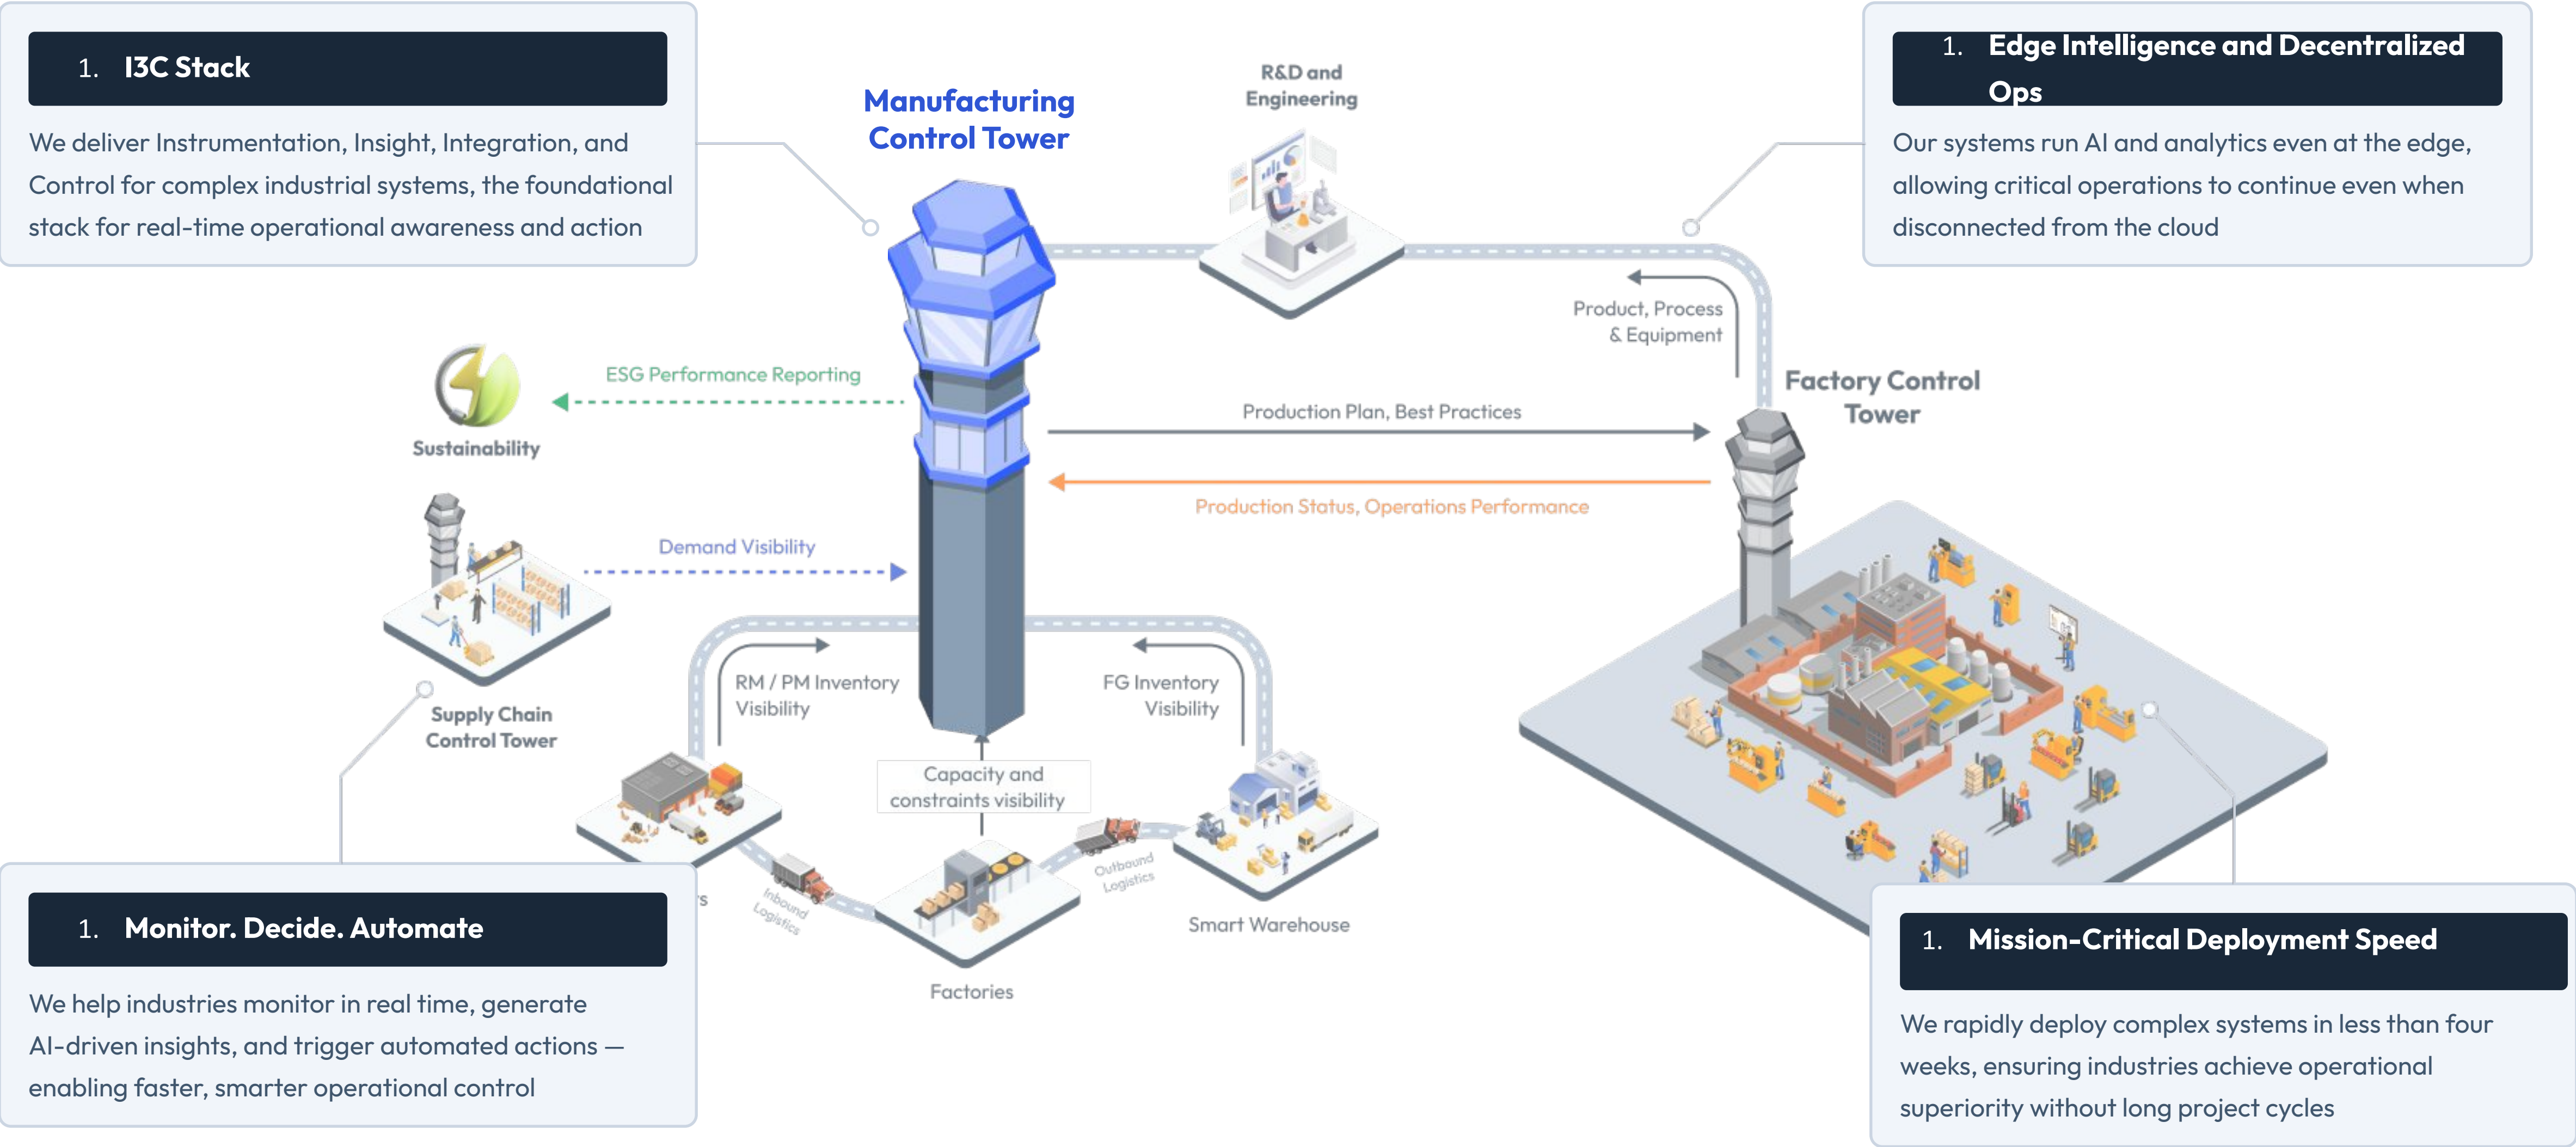

SAST, DAST, and linters are integrated into CI/CD pipelines to detect and address security vulnerabilities early in the development lifecycle

**Trust Your Dependencies** RTM - 3 months

Third-party libraries are continuously scanned and updated to eliminate potential security vulnerabilities
